

Regeneration - the new re-growth engine for the built and natural environment

Time: Tuesday 12 May 2009, 18.30

Location: Institution of Civil Engineers (ICE), One Great George Street, London SW1P 3AA

Prof Storm Cunningham,
Seneca College of Applied Arts and Technology,
CEO Resolution Fund, Washington, DC

About the topic

Regeneration and nature restoration activities represent an estimated \$2 trillion per year global economic operation. Although well established, the industry is highly disparate and lacking in effective integration. Redevelopment expert Storm Cunningham reveals a vast new realm of fast growing, highly profitable opportunities to revitalize our communities. His holistic approach outlines new practices and partnering strategies that achieve rapid, resilient renewal.

His audiences are developers, investors, planners, architects, engineers, community activists and politicians.

About the speaker

Storm is the author of two important books: "The Restoration Economy" (Berrett-Koehler, 2002) and "Re-Wealth," (McGraw-Hill, 2008). He is CEO of Resolution Fund, LLC in Washington, DC. From 1996 to 2002, he was Director of Strategic Initiatives at the Construction Specifications Institute, a 50 year-old association of 18,000 architects, engineers, contractors, and manufacturers.

He is also a Visiting Professor at the Revitalization Institute, Seneca College of Applied Arts and Technology, Toronto, Canada. He helped establish the Institute which has developed a world wide network that includes Kingston and London South Bank Universities as the UK centres.

The event is free but booking is essential.
